ANNUAL FLOWERS FOR YOUR 1954 GARDEN

2546 Condon's New Giant Hybrid Zinnias

Latest creation in this popular garden annual. Loveliest new flowers ever offered. They include all Zinnia colors besides combination of colors never before seen. The color range is truly spectacular in its brilliance, but still does not contain any harsh colors. Blooms are large fluffy and ruffled, measuring 6 to 6½ inches across and attractively curved petals more like giant Chrysanthemums. Plant is strong, robust grower. Produces abundance of blooms on stately stems with heavy foliage. Excellent for bouquets or garden effect. Seed may be sown out of doors when danger of frost is over without the trouble of transplanting, and assuring a rainbow of color not equaled by any other garden flower. Pkt. 25c; 2 pkts. 45c; ¼ oz. \$1.00; ¼ oz. \$1.75; oz. \$5.00.

2560 Floradale Scarlet Zinnias

New Scarlet Red Zinnia with graceful flower form. The large blossoms, which grow 5 to 5½ inches across and about 3 inches deep, are made up of hundreds of strap-shaped petals which are ruffled and fluffed just enough so that the sparkling and lively color of the upper surface is softened by the effect of the sunlight glancing off the small re-curved portions of the petals. The petals are curved under, and twist gaily which dispels all the thought of the stiffness heretofore associated with some Zinnias. Plants grow 2½ to 3 feet tall. Blooms on long stems. Ideal for cutting or mass plantings. Pkt. 25c; 2 pkts. for 45c; ¼ oz. \$1.00; ¼ oz. \$1.75; oz. \$5.00.

"Gentlemen: I wish to thank you for the order received from you this spring but most of all I want to express my appreciation for the excellent manner in which you packed your Northern Grown Patented Roses and other Nursery Stock. It came clear across the continent in perfect condition and every item is growing beautifully. Please accept my thanks for the way you pack and ship.

"Adams, Mass., September 2, 1953.

"Dear Sirs: This letter is to let you know about the wonderful crop of hybrid tomatoes and hybrid cucumbers I had despite the long, dry season. The tomatoes average 10 ounces to 2 pounds and the plants are loaded in clusters of four to five tomatoes. We never saw anything like it. The hybrid cucumber is also something for sore eyes. Some were over 12 inches long and the vines were loaded and we are still picking them and the vines are still green. The neighbors wonder how I do it every year. I am going to put some on display. It sure pays to buy your hybrid seeds and your other seeds also.

"Sincerely,

W. H. Volkmer."

My Garden and I

FOR more than a score of years, my garden and I have been good friends . . . friends that never bore, never impose and never inflict any penalties upon one another. We understand each other . . . and as a result . . . both of us flourish. But my garden is different from the average . . . vastly different.

For instance, in the average garden when one plants petunias, petunias come up and bloom . . . and if one plants radishes, radishes grow! But I repeat, my garden is different . . . I plant petunias, asters, zinnias and harvest in bountiful return . . . contentment, satisfaction, relaxation and appreciativeness.

In short, my garden gives me solace and quietude from a world of turmoil and strife . . . it is the one spot in my life, where, after the world extracts eight, ten and even twelve hours of physical and mental energy, I can gather to me a feeling of contentment, and rest, that try as I may, I cannot duplicate it in any other manner, believe me.

To start with, my garden is no different than that patch of ground outside your own doorstep . . . it starts out exactly the same as that . . . with dirt . . . the stuff for which children are scolded when they become too familiar with it . . . and yet, did you ever see a healthy normal youngster that didn't like to dig in the soil?

There's something warm and intimate in working with good growing-earth . . . and why not . . . does not life itself stem from the very earth? So, when I plant my garden I feel privileged indeed to stimulate to life the tiny live spark deep within each seed . . . I love seeds . . . small diminutive specks endowed by God with the power

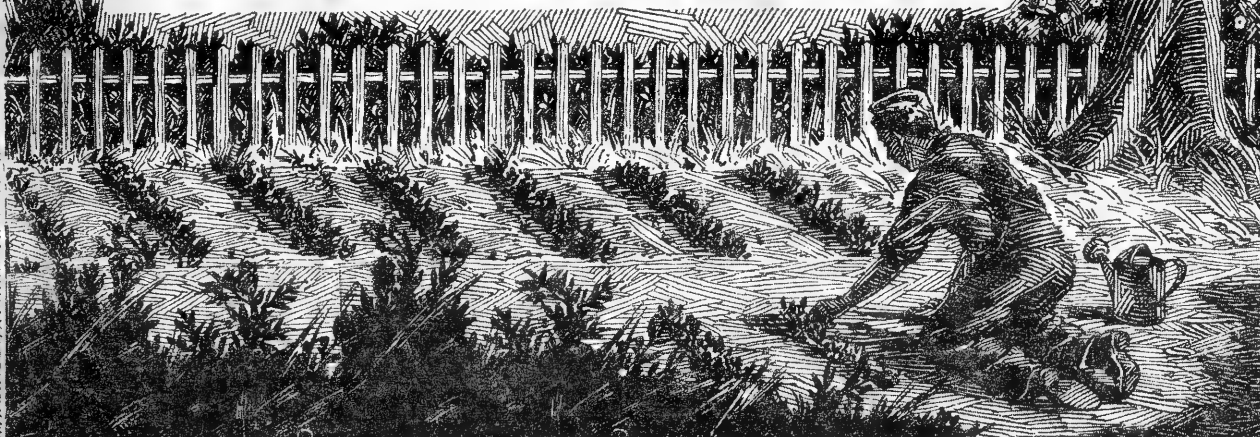

to bring forth living testimony of Nature's greatness . . . it makes me stop and think . . . when I plant a seed! And when I realize that that privilege is mine, something inside me swells with a feeling that wipes away all man-made cares and tribulations.

Yes, gardening brings a man to his knees, right down to earth . . . and for most of us that's good . . . for too often do we walk among our fellow men with our noses held just a bit too high! But on your knees in contact with the moist soil, gently warmed by Spring's early sunshine, ah! that's the time you have a moment to yourself in which to relax and think about the worth-while things in life.

Oh, yes, the world passes by my garden and admires its beauty of color . . . its fragility of blooms and its generosity of crisp, health-giving vegetables . . . some of my friends and neighbors comment on the practical side of my gardening . . . even smack their lips in anticipation of preserved fruits and tasty vegetables, way out of season . . . and others perhaps envy my "savings." Yes, those things, the passing world sees and admires.

Perhaps that's why I smile to them and to myself when their words of praise ring in my ears, for little does the world know that the outward signs of my gardening are but the aftermath of the true harvest of gardening . . . the feeling inside, that you're glad that you're alive . . . that there's a God in Heaven . . . and that once again throughout the world shall re-echo the cry that "All's Well."

GLORIOUS-NEW HARDY Chrysanthemum

Named after my granddaughter, picture at the right
Mary Catherine "Curlyhead"

13

The twist and curls of these blooms are very similar to the twist and curls on the little girl's head pictured to the right, which prompted me to name this after my first Grand-daughter.

Mary Catherine
granddaughter
6 yrs old

This new curly-headed Hardy Chrysanthemum, in our opinion, is the most beautiful and most satisfactory outdoor Mum yet introduced. The flowers are extremely large for an outdoor blooming variety, averaging 3 to 3½ inches across with 5 to 6 blooms on a single stem. If desired you can have much larger blooms by disbudding the side shoots and leaving only one bloom in the center.

When the buds first appear, they seem like a little ball of butter but as they unfold, twist and curl, they expand to a beautiful white with a tinge of lemon-yellow in the center making a contrasting color different than any other Mum. The plant is a vigorous grower, averaging 28" to 36" tall, deep green foliage, attractive leaves making a beautiful contrast between the blooms and foliage. Come into bloom forepart of September, furnishing an array of blossoms until severe freezing weather sets in. Ideal for garden display and unexcelled to cut for bouquets, to give to a sick friend and to beautify your own living room.

I wouldn't sell the girl in the picture for a million in gold, but you can have a few of these New Hardy Mum Plants, **MARY CATHERINE "CURLYHEAD"** if ordered promptly at the following special prices:

For a First Extra Early forcing variety or for early outdoor planting to bunch and sell for greens, it is unexcelled. A few years ago we distributed free for trial several thousand packages of this Extra Early Variety so when we had seed enough to list it generally thousands of market gardeners and home planters would have no other. Our comparative Trial Ground Test this year proved it beyond a doubt the earliest of all turnip-shaped beets and the greatest money-maker in the list. 269 Wisconsin Ballhead—Yellows Resistant

Latest Introduction—Entirely new and distinct. Earliest of all Ballheads. Fine texture, flesh pure white, very uniform type. For market gardening, shipping, and storage purposes, it surpasses all others. **Pkt. 20c; oz. 65c; ¼ lb. \$1.65; ½ lb. \$2.75; 1b. \$5.00, postpaid.**

309 New Super Snowball

This is the earliest of all varieties we have ever seen. It makes a firm, solid head 6 to 9 inches in diameter in about 85 days after sowing. Even under unfavorable conditions it will head up well, heads forming all at one time, showing a uniformity of size, shape, and type. The plants make a compact dwarf growth. The head is almost round. Has a beautiful pure white, smooth curd. Dry weather does not materially check its growth and therefore is able to resist diseases. Dear Sirs:

We have been using your Seeds for several years. We have had wonderful results as to quality of produce. Last year we raised 8,000 Cauliflower heads from your Super Snowball Seed, which were the finest in this part of the country, many weighing 6 to 8 pounds.

Thanking you, Arthur Moore.

308 New Dry Weather or Danish Giant

Though Cauliflower does best in a cool and moist season, in "Dry Weather" we have a variety which is actually drought-resistant and will produce heads when other varieties are a complete failure. It is of the highest quality, producing large, pure white heads, maturing a little later than Early Snowball. The heads are considerably larger than those of that famous variety. Individual heads weigh 2 lbs each. Pkt. 25c; 1/4 oz. 85c; 1/2 oz. \$1.50; oz. \$2.50; 1/4 lb. \$7.00; 1/2 lb. \$13.00; lb. \$24.00, postpaid.

Plants are dwarf; heads grow 6 in. and more in diameter and have a smooth, compact curd. They weigh about 1 1/4 lbs. each and often more if grown under favorable conditions. One of the best known. The seed we offer you is of the highest possible quality. Pkt. 25c; 1/4 oz. 85c; 1/2 oz. \$1.50; oz. \$2.50; 1/4 lb. \$7.00; 1/2 lb. \$13.00; lb. \$24.00, postpaid.

EGG PLANT

Delicious Vegetable—Easy to Grow.
Include in Your Garden This Spring.
1 oz. of Egg Plant seed will produce about 1000 plants.

May be cooked in various ways. The fruits are at their best edible stage when the skin has attained a high gloss. Use when young, at which time the seeds will be small and hardly noticeable. Keep fruits picked off as they become ready and plants should bear until frost. A rich, sandy, warm soil produces the best plants and yields the highest number of fruits. Seed should be started in a hotbed, or indoors in shallow boxes, 8 to 9 weeks before the time to set the plants out in the garden. Don't plant in the garden until danger of frost is past.

378 Black Beauty

As large as the New York Improved, but about ten days earlier. The skin is a rich, lustrous purplish black—the satin gloss and rich coloring add greatly to the beauty of these "eggs." The intensely brilliant coloring is uniform over the whole fruit. Pkt. 20c; 1/2 oz. 55c; oz. 95c; 1/4 lb. \$2.25; 1/2 lb. \$4.00; lb. \$7.50, postpaid.

Condon's Superior Varieties of Table Carrots

290 Half Long Danvers Condon's Select Strain

For Critical Market Gardeners and Private Planters—The Earliest and Sweetest of All Table Carrots Used Annually by the Largest Planters

Condon's select strain of Danvers carrots have been the standard for over fifty years. Carrot-breeding is in about the same class as stock-breeding, and if same is not kept true, will deteriorate very quickly. We have endeavored to do more than keep the old parent sort true, and have actually bred up the quality of Danvers Carrot to such perfection that the old parent sort would be ashamed of itself. To distinguish our sort from others, we have termed our strain Select Danvers. Same has been bred for quality and for yield and on a given acreage it has produced a larger crop of marketable roots than any other garden or table variety. The roots are of a rich orange color, crisp and sweet. Pkt. 15c; oz. 45c; ¼ lb. 90c; ½ lb. \$1.50; lb. \$2.75, postpaid.

In color it is the most perfect Purity White grain corn you ever saw, making it the most attractive ear when served on the table and the most valuable variety for canning, retaining when canned that distinct purity whiteness which makes a big demand for it at good prices even when the markets are loaded with other varieties. 2 oz. pkt. 17c; ½ lb. 40c; 1b. 70c; 2 lbs. \$1.30, postpaid.

Oh! What a garden. There were Asters, Ageratums, Alyssum, Gaillardia, Balsam, Nasturtiums, Poppies, Petunias, Pansies, Salvia, Zinnias, Verbenas, Snapdragons and many other Annuals. I have raised lots of Muskmelon in the past, but this melon takes the head of the class.

Great 80 day Melon—"Sweetest of All"

Suitable for Shipping One to Three Hundred Miles

There is no melon superior in quality to a good strain of Kleckley Sweets. The bright scarlet flesh is the ideal of water melon quality—firm, crisp, entirely free from stringiness or cotton, and "sweet as sugar."

The melon is oblong in shape, about 20 inches in length by 10 to 12 inches in diameter. The skin is a rich dark green; the rind is thin and brittle, and for this reason the melon is not a good shipper to a distance beyond two or three hundred miles, but for home use and nearby market consumption it's got 'em all backed off the list. Our seed is all saved from hand selected, uniform, well shaped, fully matured, ripe melons. This extra care in selecting the melons from which the seed is saved costs a little more than the method generally used but it insures you seed of the highest quality with strong, vigorous germination. Pkt. 15c; oz. 40c; ¼ lb. 65c; ½ lb. \$1.00; lb. \$1.85; 2 lbs. \$3.50; 5 lbs. \$8.50, postpaid.

490 Early Kansas Red Seeded

A new melon of genuine merit. It has suddenly become very popular on the markets of the Midwest, due to its earliness combined with large size, and its attractive appearance—plus fine quality. The skin is dark green with alternate stripes of a lighter shade. The rind is of medium thickness—well suited for carrying reasonable distances—and the flesh is a rich red color, of delightful flavor. Average size 15 by 13 inches; weight 40 lbs. Seeds brownish-red. Pkt. 15c; oz. 40c; ¼ lb. 65c; ½ lb. \$1.00; lb. \$1.85, postpaid.

It is late to mature; size 10 inches in diameter; seed small, shiny black, flesh pink, solid and stringless. The flavor is sweet, crisp and surprisingly delicious. Mushroom beds may be made in a warm, dry cellar or in any building where the frost does not penetrate, and in the open air during the summer and fall months. About a fortnight or three weeks before the beds are to be made collect a quantity of fresh horse manure without the straw; place it in a heap under cover, and as it heats keep turning it over once or twice a week, until the fiery heat has become exhausted, which will require from ten to fourteen days' time. When the manure is in a condition to be made up, lay out your bed according to complete easily-understood directions which we send free with each order. "The World's Greatest" Main Crop Tomato

Catalog Number 768

Absolutely Coreless, Practically Seedless, Solid Meat, and a Beautiful Bright Red Color. If you don't give this grand variety a trial this year you are neglecting your own interests

In shape, MATCHLESS TOMATO is smooth, well-formed and extremely deep from stem to blossom, making it unusually heavy. It ripens evenly to the stem and is without ridges or cracks; it has great meatiness and few seeds. It is firm without being hard, unrivalled home and market tomato. The vines are vigorous but compact. The joints are short and it always fruits in large clusters at every second joint, which accounts for its wonderful productiveness. Matchless Tomato is the heaviest for its size of any variety and, on account of its brilliant red color, depth and solidity, is one of the handsomest tomatoes. Its beautiful appearance and color make it sell ahead of all sorts, and its unusual solidity, few seeds and desirable form for rapid peeling without waste, make it a most desirable canning and slicing variety. It costs you no more; takes no more time to grow the best than it does to grow the more common sorts and we think you will find Matchless Tomato one of the Grandest Tomatoes you have ever grown. It grows very tall, attaining a height of 8 to 10 feet; is prolific in its nature, having from two to three ears to the stalk, makes a heavy thick growth of fodder, and is altogether, in our opinion and in the opinion of those who have tested it, the best and most productive of ensilage corns. **POSTPAID PRICES**—2½ lbs., \$1.45; 5 lbs., \$2.65. **NOT PREPAID PRICES**—½ bu. Gentlemen: Your "Silo King" Corn is everything you say. Our field of Corn stands 13 feet, 6 inches tall, each stalk has 1 to 4 ears of Corn and the greatest amount of foliage we have ever seen. This field is the envy of the surrounding territory and I'm sure there will be many acres planted next year. Yours truly,
William Scheller, Rt. 4, Box 172.

1309 **FUNK'S-G-114-HYBRID SEED CORN—BEST BY TEST**

Field Scene of One of Our Fields of "G"-114 Hybrid Seed Corn Grown Here at Rockford
Some people call it "intestinal fortitude." Others call it simply "guts." Anyway, in G-114, it's the ability to stand up against the beating that the North Central Corn Belt often hands out in weather and in insect attacks. Against cold spring dampness. . . . Against scorching summer drought. . . . Against blasting wind. . . . Against corn borers and other insect enemies. G-114 comes through. Even when harvest is long delayed, G-114 stands, firmly erect. In Iowa 4-year tests, its percentage of lodging was lowest (2.9%) of any strain entered. And it yields with the best. G-114 foliage stays green after the ear starts to mature, making the extra starch necessary to finish both a heavy ear and a strong stalk. **POSTPAID PRICES**—2½ lbs., \$1.75; 5 lbs., \$3.25. **NOT PREPAID PRICES**—½ bu. (28 lbs.), \$6.10; bu. (56 lbs.), \$11.90; 2 bu. and over @ \$11.75 per bu.

1416 Sugar Cane— for Fodder (Annual)

Sow in spring in drills 20 lbs. per acre or broadcast 50 lbs. per acre. Makes wonderful silage either alone or drilled with Corn or Soy Beans and will improve materially the feeding value of the Corn. Don't plant until danger of freezing is over. This is not suitable for making Sorghum but strictly for a fodder crop. If cut and fed green, don't pasture the second growth for sometimes the second growth or leaves that come up when wet with dew form an acid, therefore, injurious to stock.

1343 Canadian Field Peas Annual

These are truly Peas and very hardy. They have pea vines that grow $3\frac{1}{2}$ to 4 ft. high. We recommend seeding early with Oats at the rate of $1\frac{1}{2}$ Bu. of each per acre broadcast. The Oats hold the Pea vines off the ground, and produce a larger yield, better quality. For early hay crop they lead the list but should be cut as blossoms appear on the pea plants.

POSTPAID PRICES— $2\frac{1}{2}$ lbs. \$1.40; 5 lbs. \$2.65. NOT PREPAID PRICES—10 to 25 lbs. @ 21c per lb.; 25 to 50 lbs. @ 17c per lb.; 50 to 100 lbs. @ 15c per lb.; 100 lbs. and over @ 14c per lb.

1382 Rape— Dwarf Essex (Annual)

Very profitable farm crop. Grows $1\frac{1}{2}$ to 3 feet high, with broad, fleshy leaves resembling Turnips, but root system is like Cabbage. Used for hog and sheep pasture but not for cows. Sow in early spring or mid-summer 10 lbs. of seed per acre broadcast. If you add $\frac{1}{2}$ bushel Canadian Field Peas and $\frac{1}{2}$ bushel of Oats or Barley it will enhance the value of the pasture. If you have a tight pasture sow with all small grain and when the grain is cut your hogs and sheep will have a feast until after the extreme cold weather. Very valuable for feeding lambs at weaning time.

POSTPAID PRICES— $2\frac{1}{2}$ lbs. \$1.40; 5 lbs. \$2.65. NOT PREPAID PRICES—10 to 25 lbs. @ 23c per lb.; 25 to 50 lbs. @ 19c per lb.; 50 to 100 lbs. @ 17c per lb.; 100 lbs. and over @ 16c per lb.

1419 Sunflower

A small patch of cultivated Sunflower produces a great quantity of the very best poultry feed for winter. Drill in rows 36 to 42 inches apart, using 10 to 12 lbs. of seed per acre and cultivate one way. Cultivate the same as Corn. Cut seed heads in the fall before frost, place them in the barn away from the poultry until they are thoroughly dry, after which they may be flayed and fed to all your poultry in combination with other grains.
POSTPAID PRICES—2½ lbs. \$2.05; 5 lbs. \$3.90. NOT PREPAID PRICES—10 to 25 lbs. @ 35c per lb.; 25 to 50 lbs. @ 31c per lb.; 50 to 100 lbs. @ 29c per lb.; 100 lbs. and over @ 28c per lb.

HOW TO PERPETUATE YOUR CANNA BEDS

In the fall after the first severe frost which will color the leaves and stems, cut the stalks off 8 inches from the crowns, dig with a sizable amount of earth around them, put in the basement and cover over with earth and dry sand and keep in a temperature of 55 to 60 degrees. Don't shake off the dirt that adhered to the roots in digging. In the spring you may divide the roots for re-planting.
